The following are the ratings from each showing of a new episode of Avatar: The Last Airbender. Ratings come from AnimationInsider, TvGuide, and mostly Media Life. The ratings from Media Life are found in Households. I am using a conversion scale of 1.3584 in viewers in millions to households to covert these. This is in no way at all an accurate scale. It just gives a good approximation. If it says "Not Listed/Under \_\_\_," that means it was not listed for that week in the top cable shows, and the lowest show on that list had \_\_\_ viewers.

All Ratings are total viewers in millions:

Season 1- Most episodes under 3 and maybe even 2 million. Sporadic episodes hit over 3 million while the series premier and season finale scored about 3.4 million each.
